System

We can make inflatable marquee by two kinds of workmanship. One is sewing that specializes in the production of continuous inflatable tent with blower. And the other is hot welding, which specializes in producing airtight tent.

If you like our tents, please tell us the person number you want to contain, the status of the site and the usage. And then we will suggest you the most suitable style, size and material. Of course, also we can make outdoor inflatable tent completely as your requirements (design, size and colors).

1. Best commercial 0.4mm PVC tarpaulin

Good material is very important for inflatable tent. Our inflatable tents are made from high durability fire-retardant 0.4mm PVC tarpaulin, which has 3 layers, two PVC coated sides with a strong net fabric inside. And the material has passed EN71-2-3, RoHS and SGS test.

2. Firm stitching

We make double-stitching everywhere, with fourfold stitching at bottom stress points; double stitching inside and double stitching outside, which make sure the inflatable tent is strong enough for playing.

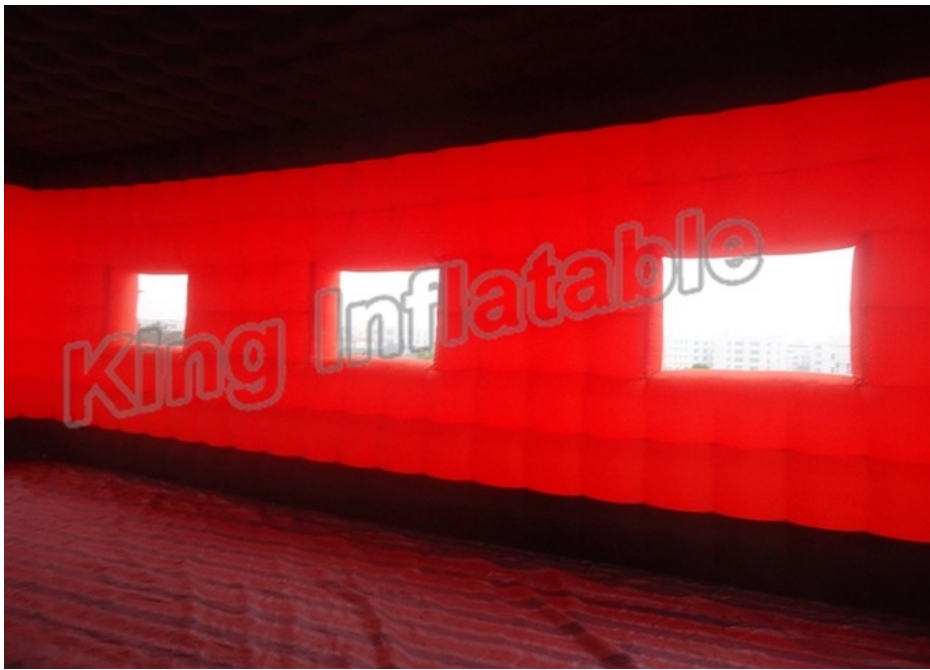

3. Vivid artwork

We mainly have digital printing, silk printing and hand painting. We imported the digital printing machine from Japan, which prints quickly and in good quality. The quality of print ink also meets SGS standard. Moreover, we make a liquid protecting film on the surface of digital printing, which makes our products not to be sticky and no color fade, but to sustain a long time.

4. Easy deflation

We make enough air-out zippers for each inflatable tent according to the requirement of EN 14960, which can help you deflate this inflatable tent more quickly. We reinforce for all the zipper joints, and there is a zipper cover by Velcro material, which helps to disperse the zipper's stress.
